JANUARY corresponds to July in Great Britain. It is usually one of the hottest months of the year, and marked by frequent thunderstorms, though in 1882 they were singularly absent, and were indeed so during the whole of the summer months of 1881-82. The weather in January, 1882, was much warmer than usual, the mean shade temperature, 81°-2°, being 2°-2° over the average of the month for the last ten years, and 3°-5° over the average of the previous three years. The highest readings in shade, 103°-0°.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JANUARY.

Written expressly for *Slater's Almanac* by Albert John Hockings.

GARDEN AND ORCHARD—Dig deeply all unoccupied beds, turning in all such garden refuse as will add to the fertility of the soil by its decay. Heavy soil is much improved in texture when thrown up roughly and exposed to the influence of the summer's sun, being rendered more friable. Fork between the rows of vegetables when the soil has become hard after heavy showers. Water vegetables freely in dry weather, giving occasional dressings of liquid manure. In favourable weather sow French beans, brocoli, cabbage, carrot, cauliflower, celery, mustard, cress, lettuce, endive, okra, peas, parsnip, parsley, radish, salsify, scorzonera, prickly spinach, turnips, Brussels sprouts, and a few cucumber, vegetable marrow, and melon seeds, for late crop. Plant out cauliflowers, cabbages, etc., laying a leaf over each plant to protect it from the sun for a day or two. Gather herbs for drying, also onions, garlic and eschalots, as the tops die down. Peach, apple, and other trees should be

were on the 2nd and 21st; the lowest on grass, 59°, was on the morning of the 20th. The mean barometric reading, 29.902 inches, was 0.023 inches under the average of the month for the last ten years; the highest, 30.110 inches, was at 9 a.m. on the 8th, and the lowest, 29.623, at 3 p.m. on the 2nd. Rain fell on 4 days; the total fall, 0.61 inches, being 5.78 inches under the average of the month for the previous ten years. The maximum fall during 24 hours, 0.41 inches, was on the 5th.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JANUARY.

formed during summer by disbanding with the finger and thumb when the shoots are ill placed, and by nipping off the ends of those which are too long or over vigorous. Vines should be tied as they grow to protect them from injury by high winds, and in doing this be careful to arrange the foliage, so as to shelter the fruit from the direct rays of the sun. Gather grapes, peaches, and apples, as they ripen. Vigorous shoots of the Isabella grapes may still be pruned to produce a second crop. Vines layered now are likely to make good roots before winter. Cuttings of any valuable new sort which it is wished to multiply quickly, should be put in during this month in favorable weather. Carefully remove suckers from vines and fruit trees.

FIELD.—Destroy weeds before they seed; break up land in preparation for future crops; sow Cape barley, rye, and oats for green fodder, and maize for a late crop. Keep growing crops clean.

FEBRUARY corresponds to August in Great Britain; the weather is generally excessively hot and sultry with a humid atmosphere. In February, 1882, the weather was a little warmer than usual, the mean shade temperature, 77°·2', being 0°·1' over the average of the month for the previous ten years, and equal to the previous three years. The highest reading in shade, 102°·5', was on the 18th, the lowest on grass was 58°·0' on several occasions. The mean

barometric reading, 30·015 inches, was 0°·089 inches over the average of the month for the last ten years; the highest, 30·151 inches, was at 9 p.m. on the 23rd, and the lowest, 29·810 inches, at 3 p.m. on the 17th. Rain fell on 18 days; the total fall, 6·99 inches, being 1·61 inches under the average of the previous ten years. The greatest fall in 24 hours, 2·07 inches, was on the 10th. The total rainfall for the year 1882, up to 28th February, was 7·60 inches, on 22 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR FEBRUARY.

GARDEN AND ORCHARD.—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure. Transplant cabbages, Brussels sprouts, cauliflowers, celery, etc. Sow French beans, beet Brussels sprouts, carrot, cauliflower, celery, mustard, cress, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Plant out strawberries in ground previously prepared by being trenched and thoroughly manured. Mulch the melon and cucumber holes with a dressing of long stable manure; form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. Cucumbers, melons, French beans, etc., should be gone over daily, and gathered as soon

as they are ready, whether they are required or not; for if left on to perfect their seeds the plants cease to be productive. The fruit should be thinned from Hockings' canvase and greening apples, and the branches carefully propped, lest the trees be broken by its weight. Finish budding trees which are intended to stand over until spring. Collect leaf mould for use when planting fruit trees during the approaching winter. Loosen ties of budded trees. Tie up loose shoots of vines, extending them out to the sun; if the points are gathered up to a stake, see that the foliage is not bruised or injured.

FIELD.—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean well-ploughed deep soil. Vetches or tares, Cape barley, and sorghum should be sown for green food for stock. In sheltered and warm positions 90 day maize may be sown. Early potatoes may be planted whole. Keep the land clean, and hill up maize.

MARCH corresponds to September in Great Britain, and begins to show a pleasant decrease in temperature. In March, 1882, the weather was warmer than usual, the mean shade temperature, 77°·2, being 2° over the average of the month for the previous ten years, and 1°·8° over the previous three years. The highest reading in shade, 101°·0, was on the 15th; the lowest on grass, 58°·0, was on the morning of the 27th. The mean barometric readings were ·079 inches under

the average of the month; the highest, 30°·230 inches, was at 9 a.m. on the 26th, and the lowest, 29°·673 inches, at 3 p.m. on the 15th. Rain fell on nine days; the total fall, 0·68 inches, being 4·65 inches under the average of the month for ten years, and 4·10 inches under the previous three years. The greatest fall in 24 hours, 0·35 inches, was on the 24th. The total amount of rain that fell in the year 1882, up to 31st March, was 8·28 inches, on 31 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MARCH.

GARDEN AND ORCHARD.—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, etc., in favourable weather, choosing the largest and finest plants. Keep the beds free of weeds by frequent and deep hoeing. Give asparagus beds a dressing of salt. Transplant eschallots. Sow English beans, French beans, beet, carrot, mustard, and cress, celery, lettuce, endive, leek, onion, peas, parsnip, radish, prickly spinach, turnip, couve tronchuda, savoy, etc. Make note of fruit trees, or vines that have been sickly or unproductive during the season, so that they may be manured, syringed, scrubbed, pruned, or grubbed out as the case may demand. An unprofitable, unsightly, or inferior tree should not be allowed to cumber the ground. No crops should be grown near fruit trees.

Orange trees are often killed by digging about them. All land intended to be planted with fruit trees during the approaching season should be trenched and manured this month, if not already done. All stiff or retentive soils should be carefully drained six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be under the surface where the water will be retained, unless drainage be provided. Orange trees with the shoots in a state of rest may be transplanted this month.

FIELD.—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares, and sorghum. Sow main crops of potatoes. Hoe early potatoes; gather maize as it ripens: cut tobacco leaves as they arrive at maturity. Sow mangold and Swede turnips for winter food for stock.]

APRIL corresponds to October in Great Britain; cool weather is now setting in, and nights are frequently chilly. In April, 1882, the weather was warmer than usual, the mean shade temperature, 72° F., being 1° F. over the average of the month for the previous ten years, and 1° F. over the previous three years. The highest reading in the shade, 88° F., was on the 15th; the lowest on grass, 50° F., was on the morning of the 30th. The highest barometric reading, 30.254, was at 9 a.m. on the 20th, and the lowest,

29.812 inches, at 3 p.m. on the 30th. The mean barometric reading, 30.001, was 0.084 inches above the average of the month for the previous ten years. Rain fell on 14 days; the total fall, 6.57 inches, being 2.91 inches over the average of the month for the previous ten years, and 0.76 inches over the previous three years. The greatest fall in 24 hours, 3.85 inches, was on the 1st. The total amount of rain which fell in the year 1882, up to 30th April, was 14.85 inches, on 45 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR APRIL.

GARDEN AND ORCHARD.—Keep down weeds by continual hoeing. Thin out plants that are overcrowded. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, etc., in favorable weather. Sow English beans, mustard, and cress, lettuce, endive, leek, onions, peas, radish, etc., for succession. Sow hardy annual flower seeds. Evergreen shrubs, roses, and bulbs, may be planted. Where practicable the transplanting of fruit trees should now be proceeded with; and, if done with care, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies especially to evergreen fruit trees, such as lemons, oranges, dates, mangoes, loquats, olives, tamarinds, etc. In transplanting take care that a sufficiently large hole is dug to allow of the roots having ample room; if any of the roots have been

bruised or broken in the moving, let the damaged portions be cleanly cut off with a sharp knife do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks or any other contrivance that may answer the desired purpose, taking care that the wind does not blow it down. Water should also be freely applied till the tree has settled itself in its new position. Prop up bananas which have heavy bunches of fruit, as they are apt to be blown down by the winds now prevailing.

FIELD.—Sow vetches, lucerne, wheat, barley, oats, mangold, and Swede turnips. Gather sorghum and imphee as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

MAY corresponds to November in Great Britain. The Queensland winter may now be considered as having begun. Weather generally cool and enjoyable. In May, 1882, the weather was much warmer than usual, the mean shade temperature, 66°3', being 0°8' over the average of the month for the previous ten years, and 0°9' over the previous three years. The highest reading in shade, 86°0', was on the 5th; the lowest on grass, 45°0', was on the morning of the 27th. The highest barometric reading, 30.299

inches, was at 9 a.m. on the 18th, and the lowest, 29.778 inches, at 9 p.m. on the 30th. The mean barometric reading, 30.087 inches, was 0.016 over the average of the month. Rain fell on 6 days; the total fall, 0.83 inches, being 3.15 inches under the average of the month for the previous ten years, and 3.40 inches under the previous three years. The greatest fall in 24 hours, 0.39 inches, was on the 31st. The total amount of rain which fell in the year 1882, up to 31st May, was 15.68 inches on 51 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MAY.

GARDEN AND ORCHARD.—Transplant onions, garlic, eschallots, rhubarb, etc. Sow lettuce, endive, leek, onion, peas, radish, mustard, and cress, cabbage, turnip, carrot, parsley, and pot herbs. Dig beds intended for asparagus. In making beds choose the best soil which the garden affords, the ground must be dug deep and most plentifully manured. Rhubarb may now be planted in deeply-dug, well manured beds. The onion crop sometimes suffers severely from the ravages of a green grub which is in some soils in large numbers. They come out at night and cut off the young onions level with the surface as if cut off with a knife. Land intended for this crop should be previously examined for these pests, and if possible receive a dressing of soot, which would not only prove very obnoxious to the grubs, but would be a valuable manure for the onions.

Transplant fruit trees and evergreen shrubs. Do not plant too deep: put fine mould among the roots, making it firm, using water copiously unless the soil is wet. Transplant strawberries into leaf mould or well-decayed cow dung, giving them abundance of water during their growing season. In cold situations, protect tropical fruit trees, and throw a little hay over the pine apple plants, with the same object.

☉ **FIELD.**—Sow vetches, barley, oats, rye, wheat, Lucerne, and other grasses. Cut tobacco. Earth up potatoes. Rye, as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, it will make a good sward for grazing over, being green and succulent during winter and early spring.

JUNE corresponds to December in Great Britain; weather generally cool, with fine clear nights and sometimes heavy dewfall. In June, 1882, the weather was a little colder than usual; the mean shade temperature, 59° 8', being 0° 5' under the average of the month for the previous ten years, and 0° 4' over the last three years. The highest reading in shade, 77° 08', was on the 4th; the lowest on grass, 36° 0', was on the morning of the 22nd. The highest barometric reading, 30·320 inches, was at 9 a.m. on the 28th,

and the lowest, 29·793 inches, at 9 p.m. on the 18th. The mean barometric reading, 30·051 inches, was 0·062 inches under the average of the last ten years. Rain fell on 10 days; the total fall, 2·84 inches, being 0·04 inches under the average of the month for the last ten years, and 1·29 inches over for the last three years. The greatest fall in 24 hours, 0·82 inches, was on the 13th. The total amount of rain which fell in the year 1882, up to 30th June, was 18·52 inches, on 61 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JUNE.

GARDEN AND ORCHARD.—No colonial grown cabbage seeds should be sown until after September, as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will therefore heart perfectly. Transplant horseradish, eschallots, rhubarb, strawberries, seakale, etc. Dig over old rhubarb, seakale, and asparagus beds, giving them plenty of good rotten manure. Sow broccoli Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, etc. To grow water cresses, dig a trench, as if for celery: turn in abundance of well-decayed manure at the bottom, sitting some fine soil over it, and dibble the cuttings in at a foot apart, give the whole a good watering. Orange trees which are not in good health should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil, to the full circuit of the foliage of the tree, should have a dressing

of stable manure. Apple trees affected with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable: and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

FIELD.—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, rye grass, vetches, prairie grass, etc. Prepare land in warm situations for sowing with maize and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops.

JULY corresponds to January in Great Britain, and like it, is the coldest month of the year, though the sun has considerable power in the middle of the day. In July, 1882, the weather was cooler than usual, the mean shade temperature, 58°·3, being 1°·0° under the average of the month for the previous ten years, and 1°·2° under the previous three years. The highest reading in shade, 79°·0, was on the 13th; the lowest on grass, 33°·0°, was on the morning of the 31st. The mean barometric reading, 30·123

inches, was 0·028 inch under the average of the month; the highest, 30·352 was at 9 a.m. on the 19th, and the lowest, 29·801 inches, at 3 p.m. on the 26th. Rain fell on 5 days; the total fall, 2·47 inches, being 0·41 inches under the average of the month for the previous ten years, and 0·94 inches over the previous three years. The greatest fall in 24 hours, 1·78 inches, was on the 15th. The total amount of rainfall during the year 1882, up to 31st July, was 20·99 inches, on 66 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JULY.

GARDEN AND ORCHARD — Plant *asparagus* beds. Sow cauliflowers, carrot, beans, lettuce, endive, radish, spinach, etc. On sowing seeds after rain see that the land is in a friable condition. If too wet it will clog and bind together. The soil should never be walked over or disturbed by sowing or digging the crops until it is sufficiently dry to be friable. Plant out onions and eschalots. Three or four days after planting, rake the soil between the rows in dry weather; it will kill thousands of young weeds. Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if possible. Bradiate docks, and

give a dressing of salt to the vines and fruit trees, lightly forking in well-decayed manure where necessary.

FIELD.—Finish planting lucerne. Sow oats, vetches, etc. Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangold wurzel, chicory, etc. Plant potatoes and maize. Take up and prepare arrowroot as the crop matures.

HINTS.—Never grow the same crops, nor crops of the same family twice on the same spot, without an intervening crop of a different nature.

Never transplant shrubs, or trees in a growing state. However carefully it may be done the check is dangerous and often fatal.

Let the drainage of the ground be your first care. It is impossible to succeed to any extent with vegetables or flowers, when the water is stagnant in the soil.

AUGUST corresponds to February in Great Britain, and is for the most part cold, but towards the end a rise in the temperature may be noticed. In August, 1882, the weather was about the same as usual during the month, the mean shade temperature, 62.3, being 0.1° over the average of the month for the previous ten years, and 0.7° under the previous three years. The highest reading in shade, 82.0°, was on the 21st; the lowest on grass, 36.0°, was on several days. The highest barometric reading, 30.453 inches,

was at 9 a.m. on the 26th, and the lowest, 29.786 inches, at 3 p.m. on the 5th. The mean barometric reading, 30.113 inches, was .022 inches lower than the average of the month. Rain fell on 8 days; the total fall, 1.43 inches, being 1.12 inches under the average of the month for the previous ten years. The maximum fall during 24 hours, 0.43 inches, was on the 17th. The total amount of rainfall during the year 1882, up to the 31st August, was 22.42 inches, on 74 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR AUGUST.

GARDEN AND ORCHARD.—Peas sown this month should have a cool aspect. A dressing of salt at this season at the rate of 7 or 8 lbs. to the perch would be a great advantage to most soils, tending to sweeten the land, destroy insects, discourage weeds, fungus, and mildew, and to retain moisture. Sow beet, broccoli, melons, Brussels sprouts, cucumber, lettuce, endive, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot (large sowing), leek, cabbage, cauliflower, chervil, turnip, parsnip, etc. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, etc. Destroy weeds while young, and syringe with Gishurst Compound plants which are attacked with aphid. Endeavour to finish planting fruit trees, vines and other plants, as the sun will be gaining power, which will in-

crease the labor and risk. Young orange trees which show too much bloom should have it removed, and should receive a little liquid manure to promote foliage. If any of the orange trees are affected with the aphid, they should be well syringed with a solution of Gishurst Compound, or of water in which a small quantity of soft soap and sulphur have been dissolved. Graft China pears, as they break very early. Any work left over from last month should be completed. Keep the land clean and the surface open to receive the dews and showers.

FIELD.—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, etc. Hoe up potatoes. Sow sorghum, linseed, teosinte, and tobacco. Silk worms will now require constant attention, feeding them frequently with young and tender leaves.

SEPTEMBER corresponds to March in Great Britain. In September, 1882, the weather was much warmer than usual, the mean shade temperature, 70.5, being 3.7° over the average of this month for the previous ten years, and 3.4° under the previous three years. The highest reading in shade, 92.0°, was on the 25th; the lowest on grass, 45.0°, was on the morning of the 11th. The highest barometric reading, 30.366 in., was at 9

a.m. on the 3rd, and the lowest, 29.673 in., at 3 p.m. on the 26th. The mean barometric reading, 30.000 in., was .015 in. over the average of the month. Rain fell on five days; the total fall, 0.61 in., being 1.53 in. under the average of the month for the previous ten years. The greatest fall in twenty-four hours, 0.31 in., was on the 17th. The total rainfall for the year 1882, to September 30th, was 23.03 in., on seventy-nine days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR SEPTEMBER.

GARDEN AND ORCHARD.—As summer grass and other summer weeds now make their appearance, it is important to keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well-puddled tanks to rot down for use in autumn and winter. Valuable lessons may be learned from the Belgian farmers upon this important but much-neglected subject. The Japanese are also vastly superior to us in the knowledge and practice of manuring. During the summer months in this colony manure should generally be applied in the liquid form. See that crops are not planted too closely so as to be crowded. Trench vacant land, in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow English and French beans, parsley, beet, capsicum, chili, cardoons, mustard, cress, lettuce, endive, eggplant, okra, Cape gooseberry, radish, rhubarb, round spinach,

tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, etc. Transplant cabbages, cauliflower, eschallots, etc. Plant Jerusalem artichokes, rhubarb roots, herbs, sea-kale, asparagus, ginger, earth nuts, etc. Sow rosella. In dry weather give recently planted fruit trees sufficient water at the roots, leaving the surface to be kept damp by a mulching of stable litter. Destroy all caterpillars that infest the vines about this time. Attend promptly to the disbudbing of grape vines: removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance. Plant out strawberries. Graft apples and pears.

FIELD.—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, etc. Sow imphee, sorghum, and maize for green fodder.

OCTOBER corresponds to April in Great Britain; the weather begins to be unpleasantly hot, with occasional thunder and sometimes heavy hail storms. In October, 1881, the weather was cooler than usual, the mean shade temperature, 69° 3', being 1° 8' under the average of the month for the previous ten years, and 2° 6' under the average of the previous three years. The highest reading in shade, 90° 0', was on the 2nd; the lowest on grass, 47° 0', was on the morning of the 6th. The mean barometric reading, 30·044

inches, was ·019 inches under the average of the month; the highest reading, 30·361, was at 9 a.m. on the 29th, and the lowest, 29·648 inches, at 3 p.m. on the 18th. Rain (which varies much in quantity during this month) fell on 6 days; the total fall, 1·69 inches, being 1·17 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0·90 inches, was on the 26th. The total rainfall for the year 1881, to 31st October, was 25·20 inches on 98 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR OCTOBER

GARDEN AND ORCHARD.—Keep the crops clean, mulch them and give water where necessary. Sow parsley, English beans, French beans, mustard, cress, lettuce, endive, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, etc. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality, and notwithstanding heat, dry weather, and aphids, better than any other. Convert all waste vegetables into manure in some form: either to feed pigs, or throw them into the tank to rot, or burn them out of the way, and use the ashes. Thin out the fruit on China peaches of all kinds, and carefully eradicate the suckers which spring from the root, cutting them close to their origin neatly with a knife. Remove also the strong watery shoots which fill up the inside of the tree, so as to admit sun and air,

and leave the whole strength of the plant to mature the crop. Support the branches of the trees, as the fruit swells. Examine the orange trees and if either thrip, smut, coccos, or fungus appear on the stems, scrub them as recommended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the function of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. Sulphur the vines upon the first appearance of Oidium. Plant bananas and pine apples. Trench and drain the land intended for planting with fruit trees in the winter; and if well cultivated, one crop taken from it would improve its texture.

FIELD.—Clean and earth up growing crops. Plant yams, earth nuts, coffee, arrowroot, ginger, sweet potatoes, and sugar-cane. Sow sorghum, imphee, etc.

NOVEMBER corresponds to May in Great Britain. Summer has now fairly set in, and the heat begins to be oppressive; though the nights on elevated positions are cool and pleasant. In November, 1881, the weather was cooler than usual, the mean shade temperature, 74°·6', being 1°·5' under the average of the month for the previous ten years, and 3°·0' under the average of the previous three years. The highest reading in shade, 99°·5', was on the 26th; the lowest on grass, 54°·0' was on the morning of the 7th. The

mean barometric reading, 29·905 inches, was ·043 inches below the average of the month; the highest, 30·176, was at 9 a.m. on the 8th, and the lowest, 29·600, at 3 p.m. on the 21st. Rain (which varies much in quantity during this month) fell on 14 days; the total fall, 2·38 inches being 1·58 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0·56 inches, was on the 11th. The total rainfall for the year 1881, up to November 30th, was 27·58 inches on 112 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR NOVEMBER.

GARDEN AND ORCHARD.—As the season advances the advantage of having trenched the garden land will become more apparent. Shallow unmanured land will scarcely grow anything worth collecting in hot dry weather. At this season the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded, and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly; it steadies the plants and protects them from much injury from wind during storms. Sow French beans, melons, Brocoli, Brussels sprouts, mustard, cress, cucumber, lettuce, endive, celery, okra, radish, rosella, pumpkins, &c. Thin the early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stems. Clear out all superfluous shoots to throw the whole strength of the plant into the crop: not injuring

or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak ill-placed shoots. Vigorous old Isabella vines, upon having the ripest of the present season's rods pruned during this and next month, will give a second crop of fruit. The cuttings also, if planted, will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trench land intended for planting next season, to give it the sweetening influence of the summer's sun.

FIELD.—Keep the land clean with the horsehoe. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oaten hay, cut the crop when well in ear, but before the seed is near mature; the whole plant is then in the most nourishing condition.

DECEMBER corresponds to June in Great Britain. It is a month of usually fierce sunshine and cloudless skies; the nights are sometimes pleasantly cool. In December, 1881, the weather was a little warmer than usual, the mean shade temperature, 79°·4, being 1°·3° over the average of the month for the last ten years, and 1°·5° over the previous three years. The highest reading in shade, 97°·0°, was on the 14th; the lowest on grass, 57°, was on the morning of the 5th. The mean barometric reading, 29·899 inches,

was 0·030 inches under the average of the month; the highest, 30·150, inches, was at 9 a.m. on the 4th, and the lowest, 29·550, at 3 p.m. on the 19th. Rain (which varies much in quantity during this month) fell on 5 days; the total fall, 1·81 inches, being 4·65 inches under the average of the previous ten years. The greatest fall during 24 hours, 0·84 inches, was on the 23rd. The total rainfall for the year 1881 was 29·39 inches on 117 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR DECEMBER.

GARDEN AND ORCHARD.—The seeds should be protected during the summer months from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico or light open brushwood, not too dense, would be suitable. If the seed beds were well watered with liquid manure, so as to thoroughly soak the soil, a few hours before sowing the seed, and the latter was covered by sifting over it some stable litter, there would not be many failures even in summer. Sow cabbage, cauliflower, French beans, mustard, cress, lettuce, endive, okra, radish, etc. All vacant land should be well manured and dug two spits deep. Manure and dig as the crop comes off, and the land will be ready for planting after the first shower. Place straw under the peach trees upon which the fruit may fall without bruising. Straggling wood shoots should be stopped,

to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. Trench and manure land intended for planting with fruit trees or vines. On the slightest appearance of Oidium among the vines, or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour; one pint of this, when strained, may be mixed with ten gallons of water, and applied to the affected vines with a syringe.

FIELD.—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Plant maize.

COLONY OF QUEENSLAND.

THE Colony of Queensland, the youngest of the Australian dependencies—its separate existence dating only from December 10th, 1859—comprises the whole of the North-Eastern portion of the Continent of Australia; its boundaries being—on the North the Gulf of Carpentaria, on the East the Pacific Ocean, on the West the Northern Territory of South Australia—the dividing line being the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian—and on the South the Colony of New South Wales. Its estimated area, according to a corrected return, is 669,520 square miles, or 428,492,800 square acres, being about twelve times the size of England and Wales. On August 1, 1879, this area was considerably increased by the annexation of a number of islands contiguous to the Coast. Its extreme length from N. to S. is 1300 miles, its breadth 800 miles, the coast line being about 2500 miles.

PRINCIPAL STATISTICS OF THE YEAR 1881-82.

POPULATION.—The population of Queensland according to the census taken in April, 1881, was 218,519 persons; this was exclusive of the aboriginal population, but inclusive of Chinese. The discrepancy between the census and estimated figures is accounted for by the departures overland, of whom no account is taken. On December 31, 1881, the population was estimated at 226,928—132,904 males, 94,064 females. During the year 1881-2 there were registered 8229 births, 3320 deaths, and 1703 marriages.

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every Birth must be registered within sixty days, and every death within thirty days next thereafter respectively; and neglect of this regulation renders the parties, whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application to register such birth, to pay a fee of two shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible, in all cases, the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof; but a record will be made in the Registrar-General's office if information be supplied respecting such a birth.

Every minister who has celebrated a Marriage must, within one month thereafter, transmit (in accordance with the Act 28 Victoria No. 15,) the original certificate to the Registrar of the District, and every minister who fails to transmit the certificate to the District Registrar, is liable to a fine of NOT LESS THAN £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of Burial, the minister or person officiating at any religious service at such burial ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death—unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar: Undertakers are bound under a penalty not exceeding £10 to lodge with the District Registrar, IMMEDIATELY after the burial, a Certificate of such burial signed by themselves, and COUNTERSIGNED BY TWO WITNESSES.

GENERAL RULES.

Inland letters inadvertently posted unstamped or insufficiently stamped, will be forwarded to the destination, but before delivery, double the amount of deficient postage must be paid.

Insufficiently prepaid or wholly unpaid letters posted for transmission to the United Kingdom will be forwarded, but charged with the deficiency, and a single rate as a fine.

Any insufficiently prepaid letter posted for the United States of America, will, if a single rate of postage be affixed, be forwarded and charged on delivery, with the postage deficient, and a fine of a single rate of postage; but if it does not bear a single rate of postage, it will be opened and returned to the sender.

Any letter or packet posted for transmission to British Colonies (excepting the Australian Colonies and New Zealand), and to Foreign Countries (a few places excepted), whether sent direct or through the United Kingdom, will invariably be opened and returned to the sender unless it bears the full amount of postage payable thereon.

Insufficiently prepaid or wholly unpaid letters posted for transmission to any of the Australian Colonies or New Zealand, will be forwarded, but charged with the deficiency, and a single rate of postage as a fine.

Letters, packets, and newspapers on being *re-directed*, are charged the same amount of postage in addition to the original postage, as would be payable if such letter, packet, or newspaper were originally posted at the place of re-direction.

A postmaster may refuse to receive or transmit by post any letter, packet, or package of newspapers exceeding sixteen ounces in weight, or of inconvenient form or dimensions, or containing, or reasonably suspected to contain, any article likely to injure the other contents of the mail bags or any person.

On General Holidays the Offices are only open from 9 a.m. to 10 a.m., and there is only one delivery in the morning by letter carrier. Country and other mails that usually close in the afternoon or evening, close at 9 a.m. unless otherwise intimated.

PRIVATE LETTER BOXES.

These may be obtained on the following terms, viz.:—

Without lock, £1 1s. per annum, payable half-yearly in advance.

With Lock, £1 5s. per annum, payable in advance, and a deposit of 15s. when box is applied for, of which amount 10s. will be returned, when use of box is discontinued, provided the box is in good order and Keys (triplicate) are given up complete. If the lock is rendered useless by loss of the keys or by any damage, the whole amount deposited will be forfeited. A new lock and keys will be supplied at any time, if required, on additional payment of 7s. 6d.

PRIVATE BAGS.

Settlers, upon Mail Routes, requiring the accommodation of a private bag, can obtain the same from either of the two Post Offices next to them on payment (in advance) of a sum not exceeding Two Guineas per annum to the Postmaster who has to make up the bag, subject to the following regulations, viz.:—

(1) The bag must be of leather, and provided at the cost of the person requiring it. (2) The Postmaster will close and seal it securely before despatching it; and it must be returned in like manner, sealed with some seal, the impression of which is known by the Postmaster. (3) The bag may contain letters for all persons who give *written authority* to the Postmaster to enclose them. The person paying for the private bag is responsible for the postage of all unpaid letters, and for the receipts for all those which may be registered.

NEWSPAPERS.

Newspapers are transmitted within the colony, and to the neighbouring colonies, free of charge, if posted within seven days of the date of publication; if posted after that period, one penny each. Newspapers received from beyond the colony, in monthly parts, are (when re-posted) subject to a charge of 1d. for every number contained therein.

Newspapers to be sent without a cover, or in a cover open at both ends, but without enclosure, mark, or communication, other than the words "Newspaper only," the printed name, occupation, and address of the publisher or vendor, in addition to the name, occupation, and address of the person to whom sent, otherwise they will not be transmitted. Newspapers re-posted in the colony must be prepaid, 1d. each.

POSTAL NOTES are now issued of the following classes and value:—

Half-crown note, printed with red ink ..	1d.	Ten shilling note, printed with lilac ink ..	3d.

Every note is payable to bearer on demand, unless crossed.

The shilling note is backed by a telegraph form, which, when filled up with a message of ten words, will be received at any telegraph office, and transmitted to any station within the Colony as a paid telegram.

ELECTRIC TELEGRAPH.

The Telegraph Stations in Queensland are open to receive messages from 9 a.m. to 6 p.m. daily, Sundays and holidays excepted. On Sundays, Good Friday, and Christmas Day the officers are in attendance from 9 to 9.30 a.m., and on Government holidays from 9 to 10 a.m., and 5 to 6 p.m., for the receipt and despatch of telegrams. The following are the ordinary charges:—

Press messages are charged one-half the ordinary rates (except to the colony of New Zealand) and are exempt from the additional charge of transmission after ordinary office hours.

Messages tendered for transmission must be written with ink in a legible manner, in plain language on the proper form, and signed by the sender.

Payment of all charges in advance will be required, except the following: Replies to interrogatory messages which contain the words "*Reply paid*;" messages for transmission within the colony of Queensland, or to any of the Australian Colonies and New Zealand, marked "*Collect*," when the sender is known to the officer in charge of the despatching station, and guarantees in writing, that in the event of the message not being paid for on delivery, it will be paid for on demand by the sender; in all such messages, the word "*Collect*" must be written by the sender as the last word of the message to be despatched; press messages to be paid for at receiving station on delivery.

When the sender wishes to pay for a reply, or to have the message repeated or posted, instructions are to be inserted in the address immediately before the name of the terminal station. Messages which are addressed beyond the limits of delivery can be posted to their destination free of charge.

Messages will be delivered free within one mile of the station to which addressed. If beyond that distance according to the instructions contained in the address. Expenses incurred for portage, cab hire, or boat hire, payable by the receiver, will be charged. Messages addressed beyond the limits of delivery, or which do not contain special directions as to transit, may be posted to their address by the terminal Telegraph Station free of charge. In the event of an interruption to communication by which messages may be unusually delayed, it will be optional with the senders, on application *before transmission*, to withdraw their messages and receive back the amount paid. If desired, messages of consequence can be repeated from stations at which received, to stations from which originally sent, on payment of an additional half-rate; but no responsibility will be undertaken nor any claim for compensation entertained for any errors or mistakes in transmission or delay in delivery of messages.

Telegrams to stations within the colony marked "*Urgent*" will be received and transmitted as "*urgent*" messages, and will take precedence of all ordinary messages. Double rates are charged for these messages.

Envelopes containing messages for transmission by telegraph from any place in Queensland, posted at any Post Office not a Telegraph Office, with the words "*Telegraph Message only*" written thereon above the address, and directed to the nearest Telegraph Office, may be forwarded free of postage; and the officers in charge of the Telegraph Office, to which such envelope may be addressed, shall transmit the message contained therein to its destination, provided the full fee, either in cash or postage stamps, be also enclosed.

A list of the Money Order Offices and Telegraph Stations in Queensland will be found in the Postal Gazetteer on a subsequent page.

TELEPHONE EXCHANGE.

Telephone lines will be erected and kept in order by the Post and Telegraph Department, on payment, in advance, of an annual rental at the rate of £5 for the first mile or any intermediate distance, and a proportionate rate of 25s. for every additional quarter of a mile or fraction thereof.

Instruments must be provided and kept in order by subscribers.

INTERNATIONAL TELEGRAMS.

By the system of registration of name and address, and the adoption of the word scale of charging the cost of telegraphing between Brisbane (or the leading towns in Queensland) and London and many of the principal cities of India, China, Japan, Europe, United States, and other countries, has been greatly reduced. It may be necessary to explain that the name and address of the sender and receiver being registered at the points of departure and arrival, a single word, letter, or number serves for their identification.

The principal conditions under which messages are transmitted are as follows:—

Words must not exceed ten letters. Only ordinary dictionary words allowed. Groups of figures will be charged at the rate of three to the word. Telegrams may be written in plain language, in code language, or in secret language.

Registration can be effected at the Central Telegraph Office, Brisbane. No fee is charged. Messages can also be sent through Reuter's Telegraph Co., and the Oriental Co., both of which have agents in Brisbane.

DIRECTIONS FOR MAKING A WILL.

A WILL cannot be made in language too simple or concise: it must be written with ink, and must be signed at the end of each sheet (if there be more than one) by the testator in the presence of two or more witnesses.

The witnesses, who must not be interested in the will, must strictly comply with every particular required by the attestation clause, at the end of which clause they must sign their names. A witness is not bound to know the contents of the Will.

FORM OF A WILL.

This is the last Will and Testament of me made this day of One thousand eight hundred and eighty as follows. I give, devise, and bequeath all my messuages land, tenements, and hereditaments, and all my household furniture, ready money, money secured by life assurance, goods and chattels, and all other my real and personal estate and effects whatsoever, unto my dear wife (or other person as may be) her heirs, executors, administrators, and assigns, to and for her and their own absolute use and benefit, according to the nature and quality thereof respectively, subject only to the payment of my debts, funeral and testamentary expenses and the charges of proving and registering this my Will. And I appoint my said wife executor of this my Will, and hereby revoke all other Wills.

In witness whereof I have hereunto set my hand the day and year above written.

Signed published and acknowledged by the said as and for his last Will and Testament in the presence of us, who in his presence and at his request, and in the presence of each other, have subscribed our names as witnesses.

A CODICIL

To a Will is to be made with the same regulations as the Will itself, and may be written thus:—This is a Codicil to my last Will and Testament, bearing date the day of 188 and which I direct to be taken as part thereof. I give, devise, and bequeath, &c. As witness my hand this day of 188 .

NOTE.—Obliterations and alterations of any sort in a Will ought, if possible, to be avoided: when of necessity made, they must be signed by the Testator and Witnesses on the margin, or as near to the alteration as possible.

Marriage after making a Will renders the Will void.

If a witness is interested in the Will the claim to such interest becomes forfeited.

If a person wishes to dispose of all his property in one gift, the words "all my real and personal estate" may be used.

Personal property left without a Will is devisable as under: If the deceased should leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third, and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half, and the next of Kin the remainder as follows:—A Father, the whole amount; if no Father, a Mother, Brothers, or Sisters, or their issue, equal portions; if none, Uncles, Aunts, Nephews, and Nieces, equal portions.

In regard to **SPORTING**, that well-known journal *Bell's Life in Australia* is incorporated with the *Mail*. The services of "Nemo," admittedly the most competent writer on Turf matters in the colonies, are permanently retained. Aquatics, which find so natural a home on the splendid waters of Port Jackson, are carefully chronicled by experts ; and Cricket, Football, and the minor sports are copiously reported and impartially commented upon.

PASTORAL and AGRICULTURAL.—These departments being connected with the staple industries of Australia, are regarded as special features of the *Mail*. Current legislation is carefully considered, so that the interest of Graziers and Farmers may be properly conserved ; and new inventions calculated to be useful on Farm or Station receive prompt attention. Novel as well as familiar crops form subjects for comment ; and, with a view of helping Australia, the progress of other countries is not overlooked.

MINING.—The importance of reliable information from mining districts is fully realised by the proprietors of the *Mail* ; and to overcome the effects of sensational rumours, special reports, by competent writers, of new fields, are promptly obtained.

A **LEADING HORTICULTURIST** each week provides Garden directions, which are eminently practical. The usefulness of the Horticultural Department is acknowledged by thousands of amateur and professional gardeners.

THE ILLUSTRATIONS in the *Sydney Mail* are designed by the best Artists in N. S. Wales, and executed by the best available engravers. They represent all current events capable of pictorial treatment, and are a special attraction.

LITERARY MATTERS are especially attended to in the *Sydney Mail*. Original contributions by the best Australian writers are constantly appearing in its columns, and from all sources a plentiful selection of the most curious and interesting extracts is chosen and published in each week's issue.

THE LATEST EUROPEAN AND INTERCOLONIAL TELEGRAMS are given in the *Sydney Mail*.

THE NEWS OF THE WORLD is especially and exhaustively collated for publication in the *Sydney Mail*, which enjoys the advantage of the news-collecting agencies of the most prosperous of colonial newspaper establishments.

**Subscription to the Sydney Mail: 6s. 6d. per quarter,
13s. per half year, or 26s. per annum.**

WASHINGTON H. SOUL, 177. (late 221) Pitt Street, Next Punch's Hotel.

 **ALL USE IT.** 

IT is at every picnic and in every kitchen. It gives the finish to every dish. It assists digestion. It obtained the Gold Medal at the New Zealand Exhibition, and the Silver Medal at the Perth Exhibition. It has a place at Government House, and is seen at every respectable artisan's. The Protectionists use it because it is colonial, the Free-traders because it is cheap. It is the especial favorite with all classes, because, as one of the Sydney clergymen wrote, "it is the very best yet produced." It is the AUSTRALIAN RELISH, made by WASHINGTON H. SOUL, of 177 Pitt Street, and sold by every storekeeper at One Shilling per bottle.

The Gold Medal of the New Zealand Exhibition, and the Silver Medal of the Perth Exhibition, were awarded to WASHINGTON H. SOUL, of Pitt Street, Sydney, for his AUSTRALIAN RELISH.

THE AUSTRALIAN RELISH.

POSSESSING the most delicious flavor for fish, game, wild fowls, curries, gravies, cutlets, steaks, chops, and roast meats.

Patronised by His Excellency the Governor and Lady Robinson.

Price One Shilling.

The following extracts have been selected from letters received to this date, and the manufacturer respectfully solicits the patronage of the general public of the Australian colonies.

From His Excellency the Governor and Lady Robinson.

"I am directed by His Excellency the Governor and Lady Robinson to return you many thanks for your kind present of six bottles of the Australian Relish; and I am further directed to say that they consider it most excellent. They intend to use it regularly at Government House, and to recommend it to others."

From T. S. Mort, Esq.

"I like your Australian Relish much, for whilst it is a gentle spur to the appetite, it does not appear to have anything in it likely to do harm to the stomach."

From a well-known Clergyman in Sydney.

"I think I am acquainted with all sauces, but your Australian Relish is, in my judgment, the very best yet prepared, and is quite distinctive in character."

Sold retail by all grocers and storekeepers throughout the Australian colonies,

And Wholesale by J. & J. Burns, Brisbane,

"Yes, Sir! it is **THE TAEPING MIXTURE** that makes the tea so nice this evening. I bought it myself, because I was certain it was not my fault that the tea used to be so bad. This is the packet, and if Missis will buy **THE TAEPING MIXTURE**, I promise you, Sir, that you will never again have a bad cup of tea."

"I have analysed an ORIGINAL PACKET of the Taeping Mixture, and I certify that it is composed of PURE uncoloured Tea. I can recommend it as being a WHOLESOME and REFRESHING article of diet.

"K. T. STAIGER, F.L.S., Analytical Chemist."

THIS Delicious Tea is imported in 1lb. and ½lb. Packets, to give the public the power of procuring PURE TEA without fear of adulteration; and can be obtained from the principal Grocers in QUEENSLAND, NEW SOUTH WALES, VICTORIA, NEW ZEALAND, TASMANIA, and SOUTH AUSTRALIA, where it is the FAVOURITE BEVERAGE of the wealthier classes.

## “INSECT DESTROYER.”

**This Powder will be found invaluable to housekeepers for the destruction of Cockroaches, Silverfish, Bugs, Fleas, Mosquitoes, &c., &c., while being at the same time perfectly harmless to Domestic Animals.**

---

### WE SUBJOIN THE FOLLOWING TESTIMONIAL:—

We have much pleasure in stating that we found your “Insect Destroyer” of great benefit in the destruction of Cockroaches, which regularly every summer infested our warehouse, and caused considerable damage, especially to our book stock. A little of the powder sprinkled on the shelves has had the effect of entirely banishing them, as well as the Silverfish, which we found almost as great a nuisance.
